

Lesson 22: Presentation deck

HS192 Introduction to Writing - 2
@ IITGN, 2025-26

Homework

Before next lesson, try completing your group's outline and slides. In class, we will practice making a presentation with speech.

Key questions to confirm your topic and opinion

For clarifying the topic

- What do I like? What am I interested in?
- What aspect(s) of the object I would like to share the most with the reader?

For clarifying the main claim of your essay

- What does all the researched contents tell us?
 - What does the collected data mean?
- Your final opinion must be the result from your analysis of the gathered data and facts. Try to be comprehensive and fair-minded.

Presentation deck (i.e. Google Slides)

- ❑ Supplements, but do not replace, an oral argument.
- ❑ Engages the audience and provide evidence.
- ❑ Highlights the most important takeaways.
- ❑ Considers audience and effective informative structure

Review: presentation structure

Part 1: **Introduce**: Grab attention and tell the audience what your topic is.

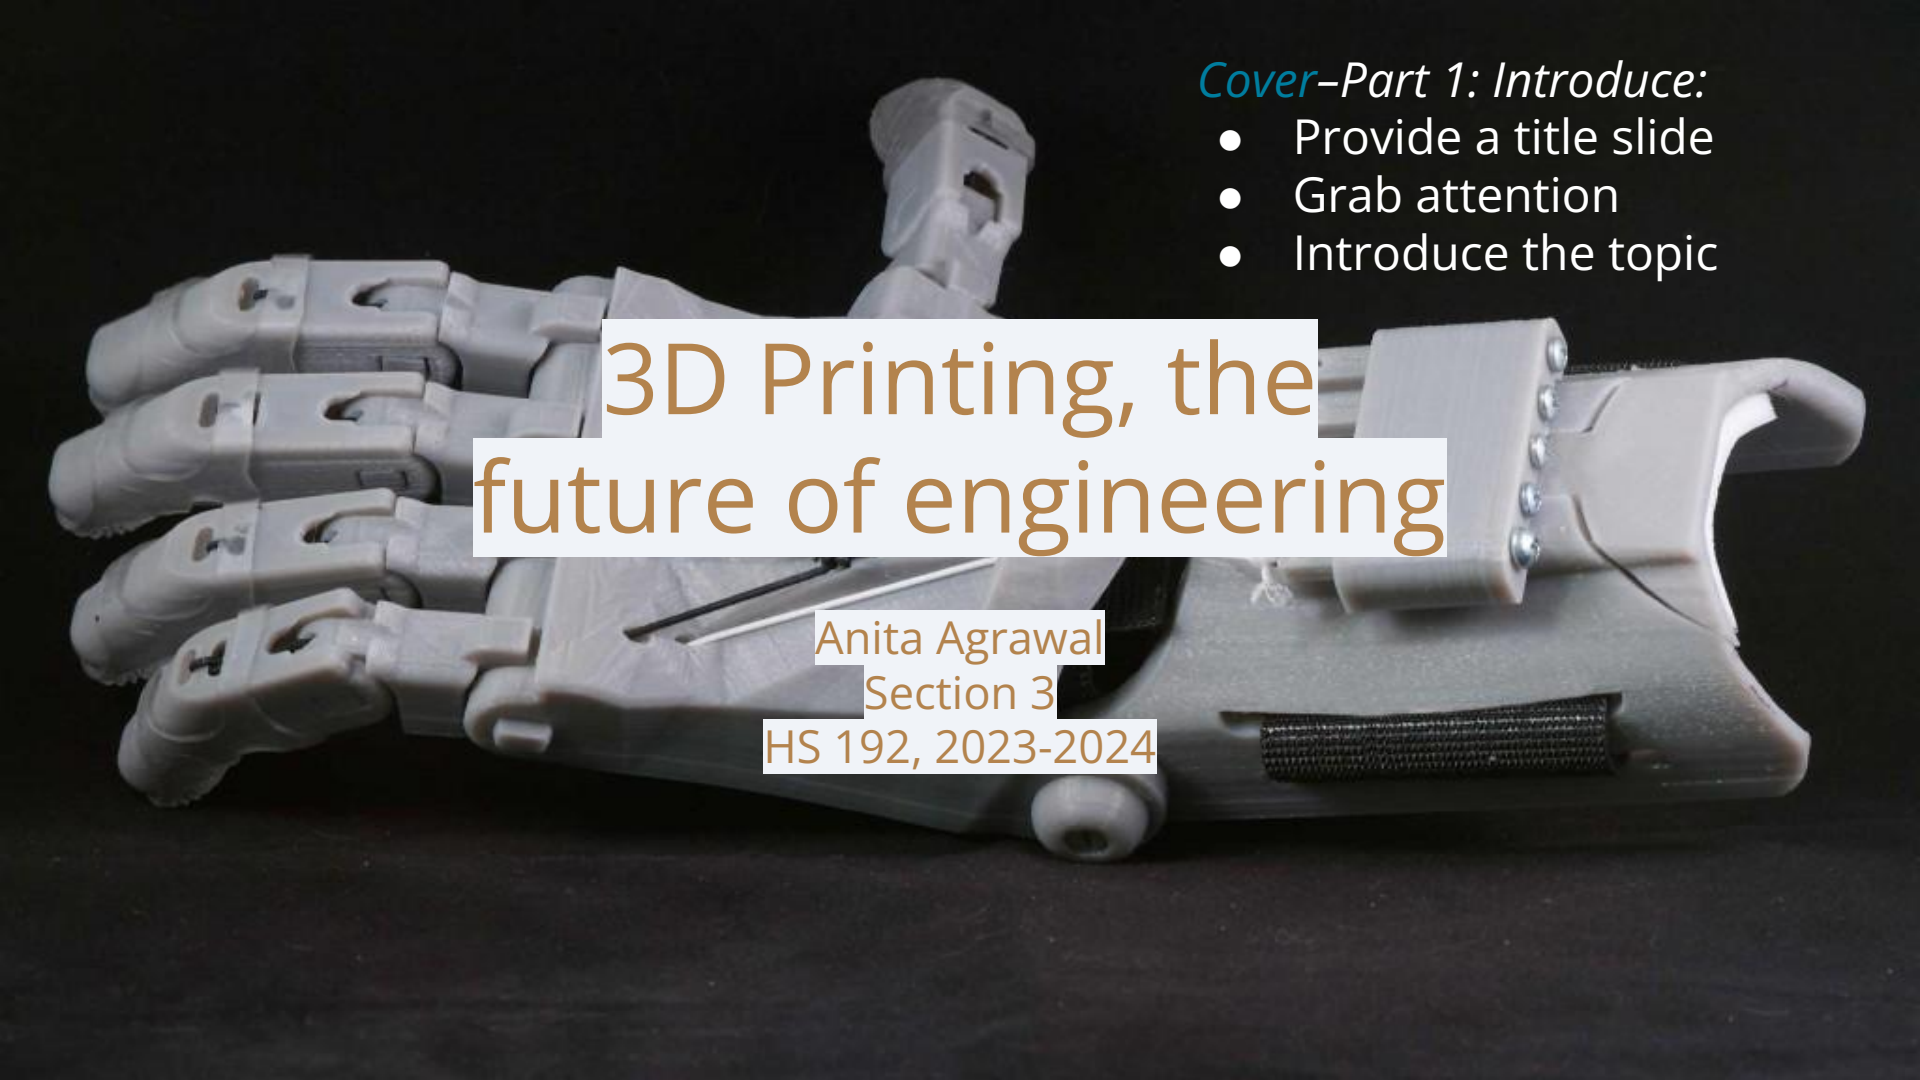

Part 2: **Define**: Give background and tell your audience why your topic matters.

Part 3: **Elaborate**: Give detailed information of key points in an organized way.

Part 4: **Conclude**: Restate and summarize with key takeaways.

Complete your slide outline considering these:

What is the purpose of this slide? What central points do I want to deliver to my audience?	What information needs to be communicated?	What will this slide look like visually?	Oral presentation notes:
(e.g. This slide inform the audience that 3D printing is an industry worth studying across the spectrum of engineering by providing key data.)	(e.g. It displays an important statistic about the future of 3D printing: "The 3D printing market value reached \$9.4 billion in 2022 in the medical industry alone.")	(e.g. I make this a large, centered stand-alone quotation with no other visuals in order to simplify audience impact.)	(e.g. Orally, I'll give additional statistics about the growth percentage that figure indicates, or comparative numbers to amplify the impact of that number.)

Cover–Part 1: Introduce:

- Provide a title slide
- Grab attention
- Introduce the topic

3D Printing, the future of engineering

Anita Agrawal

Section 3

HS 192, 2023-2024

Cover-*Part 1*: Introduce:

- Provide a title slide
- Grab attention
- Introduce the topic

[Expected content]

1. What is 3D printing?
2. A brief context
3. Your main claim (i.e. thesis statement)

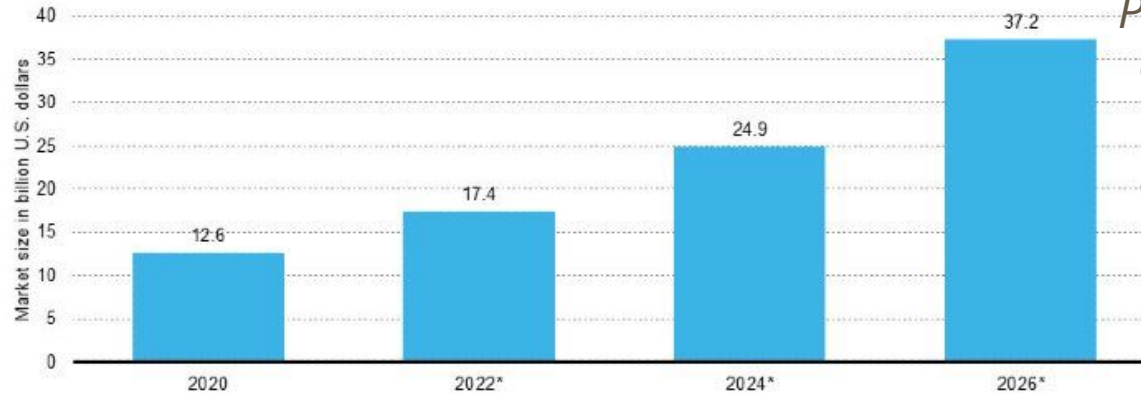

Part 2: Define:

- Tell the audience why they should pay attention, and preview your argument
- Convince your audience that your topic is important
- Use the presentation tools at your disposal! (This is just one example.)

Last year, the 3D printing market value reached \$9.4 billion in the medical industry alone. [1]

Global 3D printing products and services market size from 2020 to 2026 (in billion U.S. dollars)

3D printing industry - worldwide market size 2020-2026

Note(s): Worldwide: 2019
Further information regarding this statistic can be found on [page 27](#)
Source(s): 3D Hubs: Website (industrytoday.com): [IQ 315382](#)

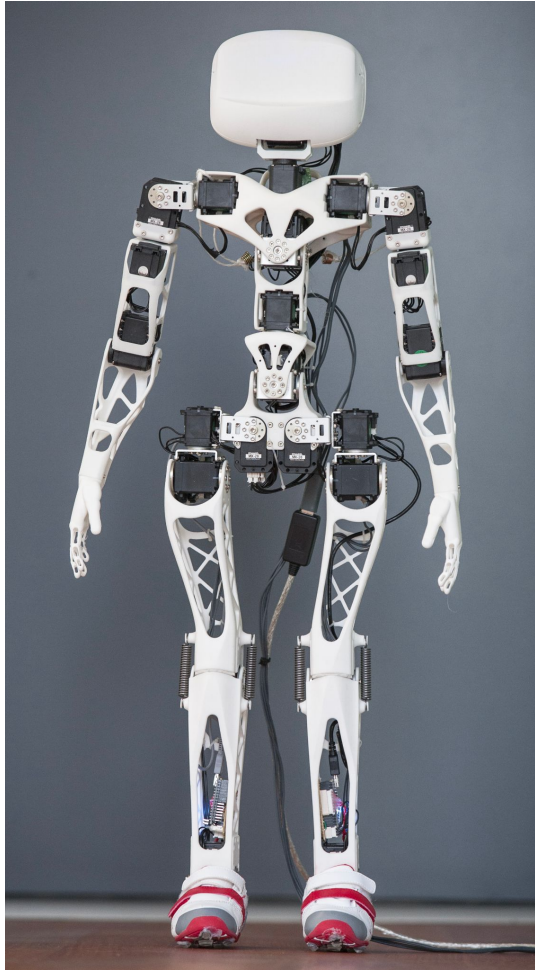

Market overview

Part 3: Elaborate

- Present research with data
- Give clear examples

Provide at least two pieces of external evidence (either quantitative or qualitative)

Fig 1. Global 3D printing market size [2]

Part 4: Conclude:

- Present your thesis
- Leave your audience with a clear take-away
- Finish with a strong image or data visual

3D printing has revolutionized the world of engineering by

1. rapid expansion of its domain of use for products and services
2. giving opportunities to build complex prototypes in a limited environment

Tips for choosing images:

- Use high quality or vector images
- Be consistent
- Avoid photo clutter
- Care for copyright
 - pixabay
 - thenounproject
 - vectorstock

Tips for choosing videos:

- Keep it short
- Make it relevant
- Be aware of your presenting context

Transitions

And

Animations

Summary of using multimedia components

Presentation decks can help you communicate to an audience with audio, video, images, and text.

- Use sound and video sparingly: build context, add evidence.
- Graphics and diagrams can help deliver abstract concepts.
- Video and sound can also give your audience a “break”.

Beware: quality matters! Enhance, don't distract.

- Try showing one piece of item (tables, charts) at a time using “animate”.
- Be cautious with unprofessional graphics!
- Avoid unnecessary GIF images because they can be distracting.

Pair work

Fill out section 2 of your project document.

- Contents
- Visuals
- Oral or contextual components
- Choice of data

Remember, every visual element should have a **purpose**
and connect to your **message**.

**Pause your work, and
share your progress with
another group.**

Pause your work, and share your progress

Group Support Check-in

- ❑ Discuss your progress as a group. What has been challenging? What is going well?
- ❑ Based on your conversation, who needs support?
- ❑ How does the presentation connect stylistically? What changes need to be made?
- ❑ Consider your data. Is it sufficient? Do you need to conduct any additional research?
- ❑ Check-in on your thesis. Will your presentation “prove” your thesis? What adjustments or revisions need to be made?

Debrief

How did the group support check-in affect your progress in the last breakout session?

What changes did you make?

What work remains for you to be ready to present a first draft of your presentation?

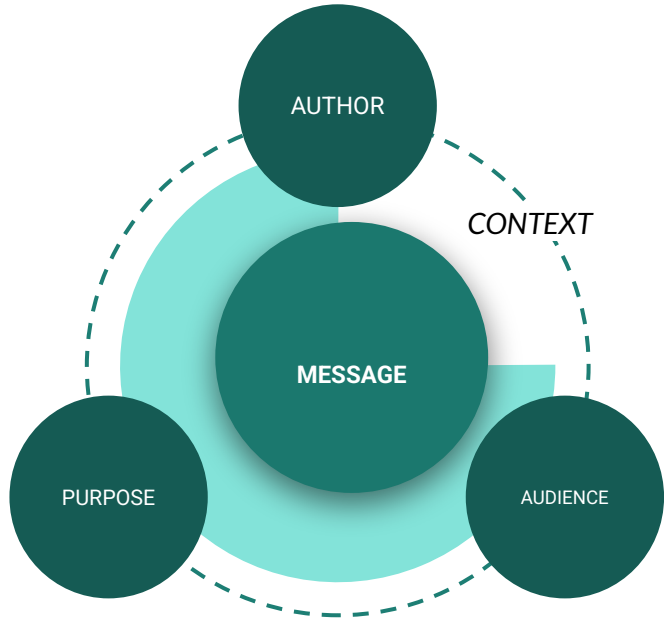

Tips: promote understanding and memory

In the presentation, you want to CAM (i) connect with audience, (ii) direct and hold attention, and (iii) promote understanding and memory

- Present relevant data to your point.
- Use a table when specific numbers are important; use a graph when a relationship is important.
- Organize a table to emphasize the important point.
- Reduce clutter and simplify labels.
- Make a proper citation.

Visual elements should: *Connect with audience*

Visual elements can contribute to logos (with diagram) and pathos (with relevant photos)

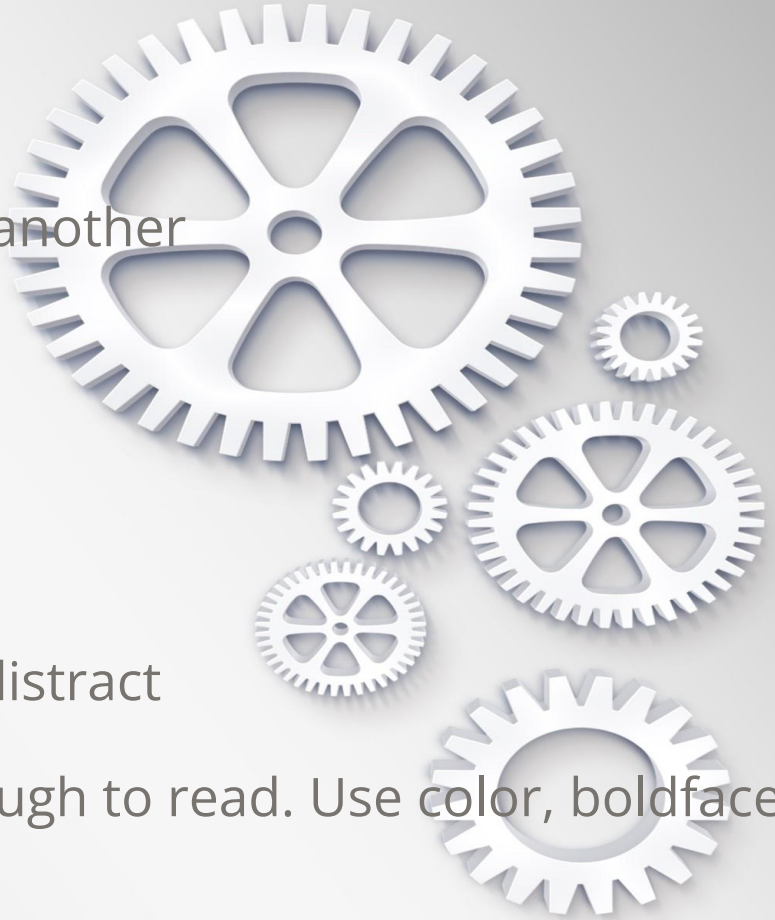

Images and texts

Image-text-speech compliment one another

Choose the visuals that are

- Simple, yet powerful
- Unique, not cliché
- High resolution
- Background images should not distract

Text should be simple and large enough to read. Use color, boldface, and capitalization sparingly.

Homework

Before this Friday's lesson, try completing your group's outline and slides . In class, we will practice making a presentation with speech.

Back to individual work

Continue to work on the presentations, adjusting your work as needed.

Use the outline planning document and the rubric as a resource to guide your work.
